The present sequence encodes a human androgen receptor coactivator designated Kb. Androgen receptor co-activator proteins from the present havinton can be used in servening assays to identify candidate pharmacentical molecules for the ability to promote or inhibit the interaction of androgen receptors and androgen responsive elements to modulate androgenic activity. The identification and characterisation

chemical agent to be rested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set Screening for anti neoplastic agent involves exposing cells to a

claim 1; SEQ ID 1210; 44pp; English.

The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ARL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has eviostatic artitity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which

```
is the data collected with respect to the anti-neoplastic agent as a result of ML, and the data is sufficient to convey the elemical structure and/or properties of the agent. M. can be used in the treatment of cancer such as colon, breast, stomach, lune, thytoid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarchnoma, carcinoma, clear cell cancer, infiltrating ductal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           110 SerThriysValAspAsnAlaMetSerArqi.cul.yslysTyrAspValLcuPhcAla 129
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            150 IleSerThrGluIleAsnSerAlaLeuVallæuLysValSerTrpIleThrFheLeuLeu 169

foreign gene csp. encoding tumour suppressor protein for gene therapy of tumours, reduces contamination by wild type adenovirus Adenoviral vector with deletion of viral protein IX contains

Dischosure; Fig 3; 92pp; English.

tumour protein. The gene can be used in a movel method involving a recombinant adenovirus expression vector to treat diseases associated with the ansence of the TSG or the presence of a mutated TSG, e.g. many forms of carcinoma, sickle cell anaemia or Tay Sach's the sequence is that of the DNA sequence encoding a retinoblastoma disease.

Sequence 2995 HP; 975 A; 617 C; 594 G; 809 T; 0 other;

```
This sequence encodes a modified retinoblastoma tumour suppressor
protein (FMSP) of the invention. The proteins can be used for inhibiting
cellular proliferation, when coadministered with a p53 protein. The RISIS
can be used for treating diseases characterised by abnormal cellular

The present acquered appears in the specification, which describes a retracycline responsive expression vector (TREV), which contains a sequence encoding a luston protein comprising a transcriptional transactivation domain (TTD) operatively attached to a tetracycline repressor protein (TRD), the first sequence operatively positioned downstream of a promoter. The vector also contains a cloning site operatively positioned downstream of a basal promoter comprising a leracycline operator. The TREVS can be used to produce stable call ince in which gene expression is tightly restained by tetracycline. They can be used for treating diseases characterised by shoromal collular proliferation, particularly cancers.

New method for increasing the proliferative capacity of cell lines comprises administering agents reversibly activating telemerase activity and reversibly inactivating Rb/INN4 and/or p53 pathways useful in treating age related diseases

Maim 5: Page 121 123; 123pp; English.

The invention concerns methods and reagents for extending the life span, e.g., the number of minolic divisions, of a cell. The method relies on a circation of a telemental activity and inhibition of one or both of a critadian of a telemental activity and inhibition of one or both of a retinoblastona (Rb)/INK4 pathway or a p53 pathway, phosphorylation of Rb by cyclin-drependent Kinases, edk4 and edke. The leases the cells into the division cycle. Hinding of INK4 family members, e.g. the tumour supressor suppressor plaimathaters can selectively and results in growth arrest. Rb inactivators can selectively and reversibly inactivate and an Figure and activity and results in growth arrest. Rb inactivators can selectively and the p53 tumour suppressor and corn also be used in the marchale function and the p53 tumour suppressor and corn also be used in the marchale which can be used in the marchale which by the residues K22. F24. H95 and/or p77. Additional constructs include a papilloma vitus E7 protein, or other viral oncoprotein which bypasses Rb and/or p53. Antisetse constructs of the Rb and p661NK44 genes may also be used. The methods are useful for increasing the proliferative capacity of cells. The cells are used to treat conditions related to (premature) agains, e.g. macular degeneration and arteriosclerosis. The cells can also be used to replace tumour cell lines in vitro and lor studies on biochemical and cosmette dispersed thmour cell lines in vitro and lor studies on biochemical and physiological aspects of no profession of normal or genetically engineered

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         designated Rb. Androgen receptor co-activator proteins from the present invention can be used in screening assays to identify candidate pharmaceutical molecules for the ability to promote or inhibit the interaction of androgen receptors and androgen responsive elements to modulate androgen's estivity. The identification and characterisation of androgen receptor co-activity as uch as those of the invention will facilitate the development of screening assays to evaluate the potential
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel androgen receptor-associated proteins used to detect androgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            24.2. anti neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in superssion of at least one gene (1) of a signature gene set, where (1) comprises a sequence (5) selected from 844? sequences (given in AHG1664 to ABU7010), or is at least 95% identical to (8), where a change in expression is indicative of out neceptastic activity. (1) has evicatally an anti-neoplastic agent, and can be used tor producing a product which is the data collected with respect to the anti-neoplastic agent as a sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stometh, lung, thyrold,

bladder, skin, stomach, liver, colon and oral cavity. Tymphoma and leukaemia. The anticancer agent induces apoptotic death of cancer cells and the Rb inhibitor increases the apoptosis inducing activity of rypelation and the profit and another cells. The agent is specific to cancers in which Rb proteins are optionally expressed and mycolactone shows very strong anticancer effect is vited as well as it who.
                                                                                                                                                                                                                                                              Also included for is an anticancer agent comprising mycolactone and antisense inhibitors of retinoblastoma (Rb) protein expression, the anticancer agent is used for the treatment of cancers such as breast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HILLIHILIHILIHILIHILIHILI IIIHILIHI II 434 GOGGAATGTGATTIACTGA 493

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   86US-0895163.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              910S-0728756.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             บังดีสิริงมี-รับดีก
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8908-0300667
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     920S-0951342. also makes the human DNA probe pH3-8. Isolated from a human chromosome 13 lambda phage library, was used in a chromosome walk to isolate Rb cDNA, the human DNA probe pH3-8. Isolated from a human chromosome 13 lambda phage library, was used in a chromosome walk to isolate and map 30 kb of genomic UNA surrounding the H3-8 sequence. Fragment pH30.7R (ATCC 97500) was obtained, and was used as a probe to screen a cDNA interprited that had been constructed from an adenovirus 12 transformed human embryonic retinal cell from an adenovirus 12 transformed human embryonic retinal cell retinal class which was not present in 4 retinoblastome and one retinal cells which was not present in 4 retinoblastoma and one osteosaroma cell samples. Ph nucleic acids comprising the kb gene, CDNA or a frayment of the june, such as one of the 27 exons or 26 introns, can be used in a claimed method for detecting a deletion or point mutation in the Rb gene of a human patient. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             yene can also be used to synthesize Rb polypeptide (see AAY01542) for use in the treatment of individuals determined to have a detective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 184 TYAYGYCAGAAATTAAAGATACCAGATÇATGYÇAGAGAGAGCTYGGTYRACYYGGGAG 243

Diagnosis of retinoblastoma - using genetic material corresp. to a normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neoplasm. It is used to produce an antibody to the protein, contacting this with the tumour sample and detecting immune complexes as indication of the presence in the tumour sample of the protein. Whose sequence or a unique sub-region can be used. The method identifies patients lacking the defective retinoblastoma (Rb) allele and thus are not at risk of

AL LONMENTS

AAV58448 standard; DNA; 4347 BP. AAV58448

Meditied retinables as that suppressor gene.

02-DEC-1998 (first entry)

AAV58448;

Modified refineblasions tumour suppressor; RISP protein; cancer therapy; certural profiteration inhibitor; ss.

Homo sapiens.

Location/Qualifiers /*tag-

```
This sequence encodes a modified retinobiastoma tumour suppressor profety (RTSP) of the invention. The proteins can be used for inhibiting cellular proliferation, when coadministered with a p53 profets. The BISPs can be used for treating diseases characterised by abnormal cellular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               proliferation, particularly cancers, The KTSPs have a broader spectrum of outivity than wild type RTSPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8) ValsorgerValAspriyyali endiyciyiyri LeClabyatyshysGulou7rpGly 100

protein RB (See AAWACASS). A new claimed polypeptide is a lusion of the autraction actor (TP) comprising a both binding domain, and (ii) a transcription lactor (TP) comprising a both binding domain, and (ii) a retinoblastoma (Rb) polypeptide that includes a growth suppression domain. Also new are: (I) a nucleic acid curoding the suppression protein, and (2) expression vectors containing such bna. The tusion protein, particularly expressed from gene therapy vectors (especially admoviture vertors), is used to treat hyperproliferative conditions, specifically cancer (particularly of the bladder) or restenosis (after angioplasty), but also diabetic retinopathy, thyroid hyperplasia, drave's discose, psoriasis, benign prostatic hypertrophy. In Fraumeni syndrome and portible at a provided. The fusion proteins are more effective in repressing transcription of the EEF promoter than Rb alone and cause cell-cycle transcription of the EEF promoter than Rb alone and cause cell-cycle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               81 ValSerSerValAspGlyValLeuGlyClyTyrlleClnLystysEysCluLeufrpGly 100

This sequence represents the wild type human retinoblastome quie. The invention relates to a method of defecting a mutated retinoblastoma (mRE) nucleic acid in mammals comprising hybridizing an isolated defecting the limit length, wildstype RE (wREB) cDNA probe to a cell sample and detecting a mutated RE nucleic acid. The method is useful as a diagnostic tool for diagnosing retinoblastoma. RE CDNA or genomic DNA are preferably used as probes to determine the defect region of the mRE gene through genomic DNA blotting analysis of using the method of restriction fragment length polymorphism analysis to determine the diseased illele. Cloped FR screening and for the prediction of the development of secondary cancer, such as, osteosarcoma, tibrosarcoma, qlioblastoma, breast, cancer whether or not connected with retinoblastoma. The method is also used in the suppression of tomorisewise where the absent RB protein ppHHIIO will be provided through the molecular induction and gene transplanting of the RB cDNA to the individual in need of ppRBIIO. antibodies which are useful for immunoscreening of tissue blopsy. The diagnostic method is particularly intended for use in screening families with a history of hereditary retinoblastoma and for screening CDNA can be used to generate specific anti RB protein (anti-ppRB110) their children. It may also be used in prophylactic and postnatal

```

The present invention describes a composition comprising a recombinant adenovirus expression vertor, where the vector has an insert of exoperious DNA comprising a quie encoding a foreign protein and adenovirus DNA in which all of the coding sequences of Ela, Elb, and protein IX, and part of El are deleted, the vectors are useful in gene therapy treatment of cancer, especially for treating p53 delicient unions. The vector enables safer and more ettlicient gene therapy of cancer. The present sequence encodes human p110 KB retinoblastoms tument suppressor which can be used as the foreign gene in the above Recombinant adenoviral vectors asetal for gene therapy of cancer, N. S. I.I.W. especially p53 deficient tumours aselosure; Fig 3: 50pp; English Maneyai D', 1999 443568/37 C'ANU DEPARTE INC P. PSDB: AAY24471 dregery RJ, =**x**366**x**b=**x**3**x**366666666666

```
The present invention describes an adenoviral expression vector comprising a delation in the protein IX gene and a gene encoding a foreign protein. This vector can be used in your therapy, particularly to introduce tumour suppressor genes into cancerous cells, Genes which may be used include p53, thymidine kinase and intimublational temour suppressor gene (Rb). The present sequence is the retinoblastoma tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Percumbinant adenovirus expression vector comprising a partial or total deletion of a protein IX DNA and a gene encoding a toreign protein e.g. suicide protein, useful for inhibiting or reducing the proliferation of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3
```

New recombinant adenovirus expression vector having a gene encoding for a fortigh profession at partial or foral deletion of the absorptial profesion IX but assettled in gene therapy for treating or reducing hyperprolliferative cells.

Disclosure, Fig 3, 49pp; English.

protein, designated as pl10RB.
The investion relaises in a reception of the adequated protein characterised by the partial or total deletion of the adequated protein ix PNA beginning at mucleorides 357 or 360 and ending at 4°20-4050, and for screening tumour suppressor genes useful in gene therapy. The vertor is particularly useful for treducing hyperproliferative cell disorders such as thyroid hyperplana. Grave's disoase, psoriasis, benign prostatic hypertrophy, if Frankeni syndrome, vancets specifically hepatoceilular cardinoma, neoplasms, lumphomas, cre, to inhibit tumour proliferation or to ameliorate particular related pathology such as sickle cell anaemia and Tay-Sachs disease. The vertor The present oDNA sequence encodes retinoblastoma (RB) tumour suppressor useful for the safe recombinant production of diagnostic and reed having a gene encoding a foreign protein such as tumour suppressor protein, pl10RB (retinoblastoma) and p53. Adenovirus vector is used therapeutic polypeptides and proteins.

Sequence 2995 RP; 975 A; 618 C; 593 G; 809 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a recombinant adenovirus expression vector. Which emphises a partial or tital deletion of a protein IX NNA and a sene encoding a loreign protein. The recombinant adenovirus vector can have cytww.lif.actil. It, and be used in sene therap. The recombinant adenovirus expression vector is particularly meant for treating or suppressing preliferation of a timour, or non-small cell lang cancer, small cell that cancer, hepatocarcinoma or hepatocellular carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            motanoma, retinoblastoma, colorectal carcinoma, sarcoma, Wilm's tumour, dstromytoma, qiloblastoma, neuroblastoma, ovarian carcinoma,
